

# Libellula.BUDGET

From DXF to quote.  
All with a simple click

## All estimates for all types of production

Libellula.BUDGET allows to obtain a quick and detailed estimate of each particular sheet metal to be produced.

Part of Libellula Universe, designed and developed by Libellula engineers to calculate the production costs for all processes of a metal structure, Libellula.BUDGET is a fast, high-performance system that does not require any specific knowledge of CAD / CAM, being required only the knowledge of the production centers of the company.

## Fast quotations and multiple costs center to know always any processing real profit

For a company, one of strategic lever to compete more efficiently and profitably in the market, it's the proper remuneration of its production factors. To reach this goal, Libellula.BUDGET offers some absolutely unique advantages for this software typology:

- ✔ **Creation of additional cost centers:** bending, welding, assembling, piercing centers are only some of possible cost centers, where it's possible to set different parameters to define the quotation calculation.
- ✔ **Icons parameter setting for cost center:** each icon has a value operations data form based on cost centers
- ✔ It will be possible, directly from the Work Library, to make a quotation on nesting already executed in Libellula.CUT. **In addition, the new DXF importer will allow the nesting import automatically divided and quoted inside the software.**
- ✔ **Creation of parameter parts for fast quotations**
- ✔ **Maximum efficiency One-Click:** "drag & drop" quick import of geometries with immediate calculation of the estimate and preparation of reports on .pdf or Excel files (Adobe PDF © and Microsoft Excel ©)
- ✔ **Multiple customization options,** to create detailed quotes and actually "tailored" according to specific user needs
- ✔ **"Real-time" quoting,** fast and efficient that it will be possible to send to its customers a detailed quote of processing while still been on the phone!
- ✔ **YES to the speed, but above all ACCURACY,** thanks to the full cost control which results in not losing money and the customer
- ✔ **Optimized material management, with reduction of waste and optimization of processing time,** improving the control of supply for a more efficient and economical warehouse management more efficient and economical
- ✔ **Optimization of for the fleet management,** with the ability to compare the cost estimates on all cutting machines in the company and choose the most convenient
- ✔ **Maximum efficiency throughout the company,** with the ability to accurately calculate the cutting times, which results in better organization and in the end, more profit

## Libellula.BUDGET

POSSIBILITY TO CREATE ADDITIONAL  
COST CENTERS BY SETTING DIFFERENT  
PARAMETERS FOR EACH ONE

OPTIMAL CONTROL COSTS OF FLEET  
AND THE WAREHOUSE

**Area Bending 1**

**Parametri di Costo**

BendLineCost

Tipo **PAINTING**

Nome **Painting Area**

### Technical Features

- ✦ Using highly automated and efficient algorithms for faster quoting from files or already existing parametric
- ✦ Possibility of quote calculation on the single piece, on nesting with a single piece or multiple pieces with different setting of the desired markup to ensure profitability
- ✦ Design "costs" which considers all aspects of production such as material used and scraps, cutting cycles (attacks, type of breakthrough, etc.), markings, any vaporization or cleaning cycles, nibbling times (for punching machines), special cycles, folding and assembling and other processes
- ✦ Intuitive user interface with minimum learning curve, and complete all the necessary details in the process of estimating, document management (offers and cost tables) and master data management and customer lists
- ✦ Maximum integration with other Libellula family Software
- ✦ Price list rules: possibility to customized the price list with various type of rules allowing calculations changes in absolute or percentage value.
- ✦ New DXF importer with advanced tool of cleaning, stair and level handling.
