Program each type of bevel cutting: with mod.BEVEL of Libellula from problem to routine

Excellent Parameterized for cutting machines equipped with bevel head, mod.bevel is one of the extensions with which you can integrate the exceptional potential of Libellula.CUT software.

A distinctive feature of the mod.bevel, part of Libellula Universe, is the possibility offered to the operator to create the CNC code for all machines with bevel head, to which is added the opportunity to manage in a few simple steps specific and diversified cuts.

Every possible angle, in just a few quick steps

Peculiarities of the module is the intuitive and efficient management of different types of cutting with inclined angle:

- From bevel loop cutting to the single bevel cutting
- Cutting bevel with the angle interpolation on the same detail
- Cutting to downward sloping
- Shoulder cutting
- Continuous cutting
- Triple type bevel cutting

Define the cutting parameters and generate the CNC code is a simple and immediate procedure: the operator can manually set or send it via the CAD environment: in any case the result will have the qualities of efficiency, precision and accuracy of the Libellula system.

mod.BEVEL and Libellula.CAD: technologies that operate in synergy

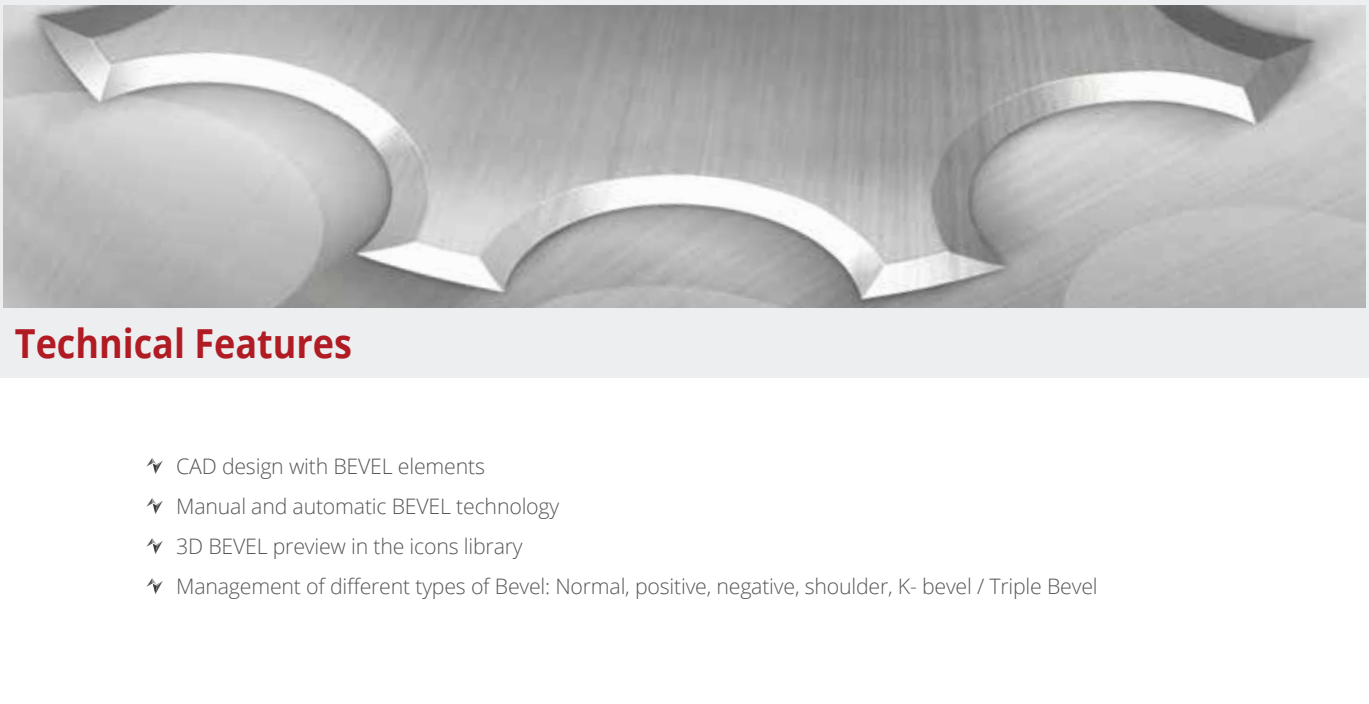
Libellula One Click philosophy

- **The mod.BEVEL management cannot be separated from the use of Libellula.CAD:** it is in the CAD environment, in fact, that the additional module finds its maximum expression, because it is here that details of the cutting piece are designed and engineered. The detailed information regarding the bevel angles applied to each semi-finished product can only be found in the CAD system
- **The import is intuitive and snapshot:** from the level of a project, thanks to the One-Click Libellula exclusive feature, it is possible to send instructions to the cutting machine which can begin to operate

mod.BEVEL

VERSATILITY AND TOTAL INTEGRATION
WITH THE LIBELLULA.CUT
& LIBELLULA.CAD SOFTWARE

FAST PROGRAMMABILITY OF EACH
CUTTING BEVEL



Technical Features

- CAD design with BEVEL elements
- Manual and automatic BEVEL technology
- 3D BEVEL preview in the icons library
- Management of different types of Bevel: Normal, positive, negative, shoulder, K- bevel / Triple Bevel
