A software of
**LIBELLULA
UNIVERSE
s u i t e**

mod.STORAGE

Control and total integration
in the warehouse management

Libellula®

Cutting The Edge Of Software Everyday
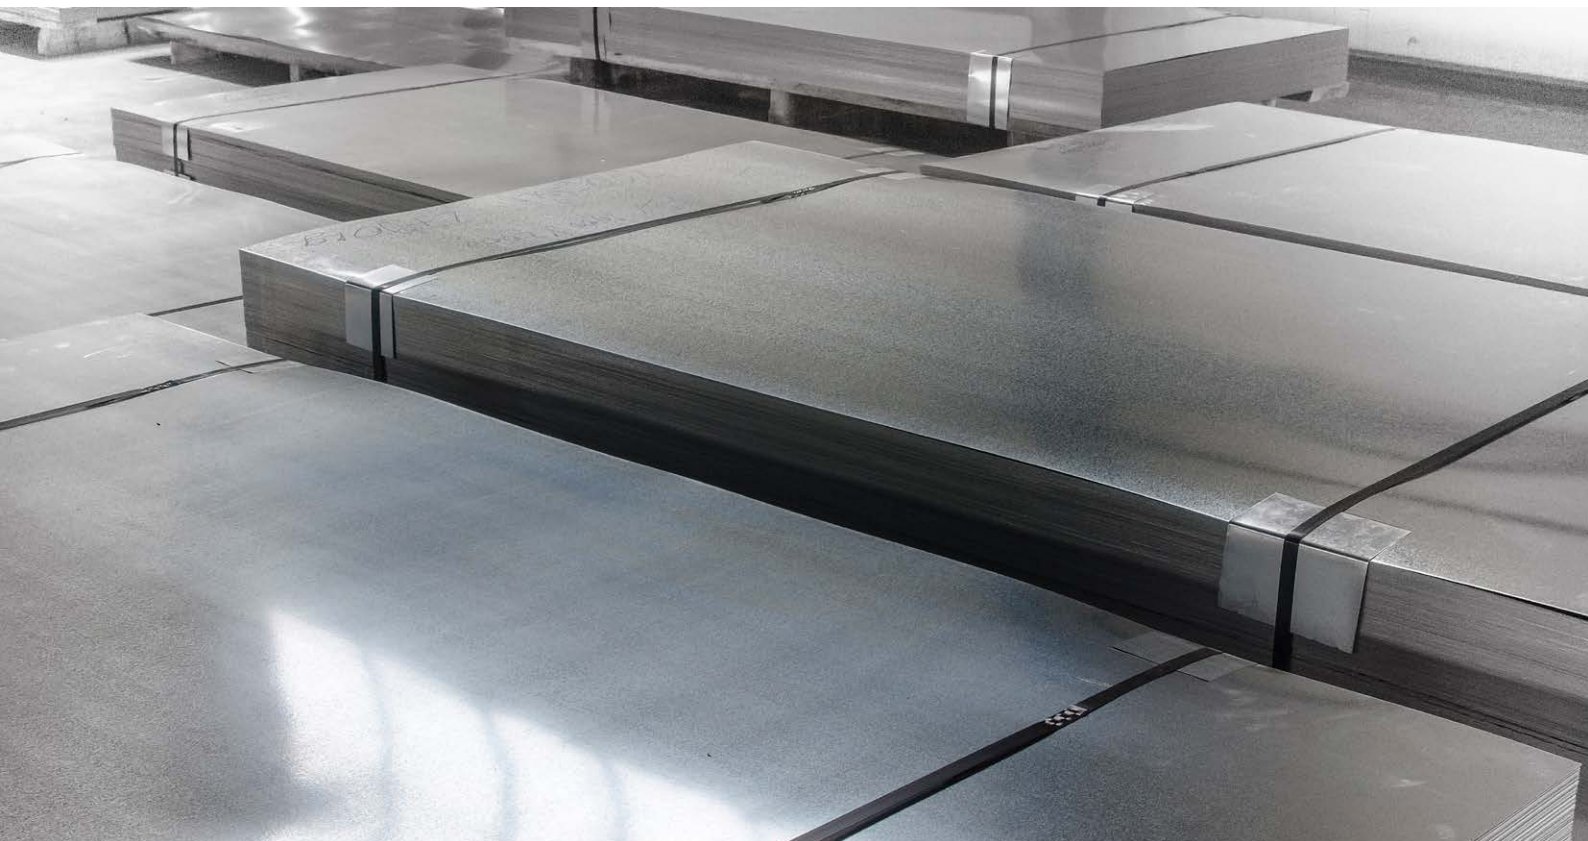

Redefines the concept of efficiency in the warehouse management

An integral part of the Libellula Universe suites, **mod.STORAGE** is the management sheet metal warehouse that enables you to **check and constantly maintain updated stock of metal sheets present in the company,** ensuring levels of efficiency and productivity that were previously not possible.

The possibility of interfacing with other software and modules of the LIBELLULA Universe, in particular Libellula.CUT, makes **mod. STORAGE able to update itself automatically,** working as a single monitoring system of its kind.
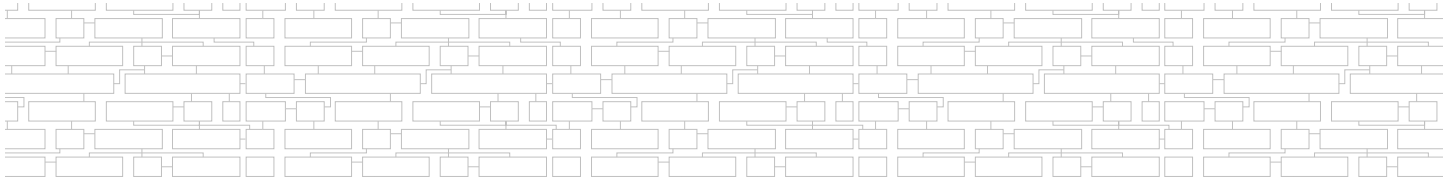

Stop the waste in the remnant/scrap management

Knowing the amount of scrap resulting from the working processes, it provides **minimal consumption of metal sheet with economic returns in terms of savings.**

Real-time reports

Mod.STORAGE offers at a **glance the stock situation:** enhanced availability of company stock, the amount of materials in use on the machines, the percentage of scrap available and even a list of the raw materials present in the warehouse and those that are ready to be packed.
